VeriProof

For healthcare compliance and risk leaders who use ComplyAssistant

Show your AI committee what each agent did.

Your AI governance committee approves each AI tool. VeriProof records how each agent acts on that approval and brings large decisions to the right person, and the evidence lands in ComplyAssistant with the rest of your compliance program.

WHAT EACH TEAM GETS

REVENUE CYCLE

Agents that clear the routine work

Small adjustments go through on their own, and a financial counselor signs off on the large ones.

AI GOVERNANCE COMMITTEE

A weekly view of how each agent behaves

The AI governance summary reaches ComplyAssistant every week, so the committee reviews what agents did as well as what they were approved to do.

COMPLIANCE

Framework evidence your committee can open

HIPAA, NIST AI RMF and other framework summaries are filed in ComplyAssistant as framework compliance reports.

RISK

The same policy, every time

Each adjustment is checked against the same policy, so the committee can show it was applied consistently.

AUDIT

Decisions an auditor can trace

Each large adjustment keeps its approver and the policy behind it.

VeriProof

From one patient's bill to the evidence your AI governance committee reviews.

ONE PATIENT'S BILL

1. A patient leaves surgery with an $8,400 balance. The billing agent checks your financial assistance policy and finds they qualify for a full discount.
2. Your rule sends any adjustment over $5,000 to a financial counselor, who approves this one in Teams.
3. VeriProof confirms the counselor may decide, and the balance is cleared before the first statement goes out.
4. The decision joins the evidence your committee sees in ComplyAssistant that week.

FILED IN COMPLYASSISTANT

AI governance summary
AI Governance Assurance

Runtime safeguards and human review
Session Evidence Pack

HIPAA and NIST AI RMF summaries
Framework Compliance Report

Exceptions and remediation
Issue Documentation

Application and model inventory
Operational Evidence

Why it fits

Alongside ComplyAssistant AI Governance

ComplyAssistant gives your committee its policies and the assessments behind each approval. VeriProof adds evidence from the agents' own actions.

Your team reads it first

Your team reads the first report and approves it, and later reports arrive on schedule.

Works with the agents you have

Agents you built report the same way as those from your revenue cycle vendor, and escalations reach people in Teams, Slack, ServiceNow or email.

> "Healthcare leaders need clear answers about what their AI agents are doing and who is overseeing them. VeriProof's integration with ComplyAssistant brings that evidence into our customers' compliance records, helping them identify risks, demonstrate oversight and answer auditors' questions."

2 in 3

provider revenue cycle teams now run semi- or fully autonomous AI agents.[1]

VeriProof shows your committee what those agents did.

Start with one workflow

Choose the agent your committee asks about most, and we'll connect its evidence with you.
