VeriProof

For resellers, system integrators, and consultants

Grow with every agent your clients run.

Business Owner

Prove each agent's ROI against AI spend and set risk limits

Governance Engineer

Write rules and test them before they enforce

Compliance Officer

Map each framework and close the gaps

Developer

Connect each agent by SDK or Agent Gateway

Administrator

Enforce separation of duties on every change

Auditor

Have verifiable evidence ready for each audit

Most agent governance tools are an integration project, but VeriProof lets you build a practice.

Each role above needs something your team can deliver. You help the client decide who approves what and connect their agents, then keep reviews moving and evidence ready after go-live.

What partners get

- Product guidance and enablement
- Sales and discovery materials
- Integration and security resources
- Support on qualified opportunities

Pilot with one client workflow, free for 60 days.

The business control plane for AI agents

veriproof.app/partners

WHO WE PARTNER WITH

Resellers

Bring VeriProof to the customers you already serve.

System integrators

Put client agents into production with rules and human review.

Consultants

Turn governance requirements into rules tested on real activity.

Audit firms

Verify how an agent operated from its signed records.

Builds on the practice you already run

Microsoft | **ServiceNow** | **Vanta** | **Splunk**

VeriProof

Package the work your clients need, from first design to recurring operations.

Start with one client agent, and the work keeps coming for as long as that client runs agents.

Assess and design

Map who answers for the agent, which frameworks apply, and how fast an exception needs an answer.

Implement and connect

Write and test the rules, then connect the agent and its reviewers, whether it's SDK-built, gateway-routed, computer-use, or made in Copilot Studio.

Operate and improve

Keep the review queue moving and policies current, review each agent's value against its AI spend and budget, and have evidence ready before each assessment.

The services are yours to sell

You deliver

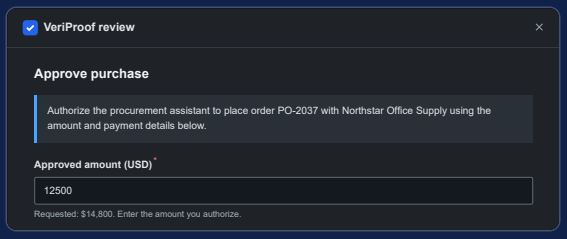
Process design, agent development and integration, adoption, and advisory services.

VeriProof provides

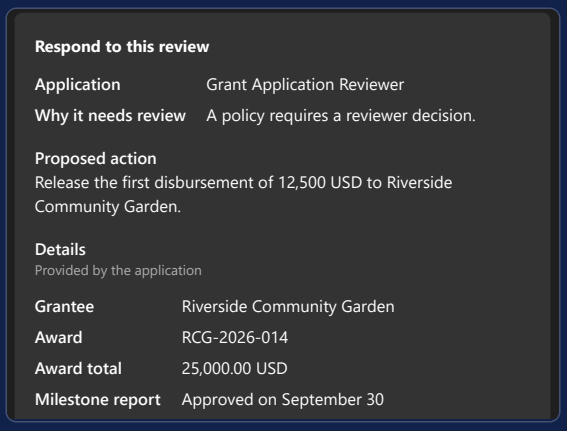
The platform, plus product guidance, integration support, and security materials for your team.

Extend the practice you already have

Microsoft	Copilot Studio, Agent 365, Teams reviews, and adapters for Semantic Kernel, AutoGen, and Agent Framework.
GRC	Evidence for 11 frameworks in Vanta, ServiceNow, and ComplyAssistant, plus the decision records OSFI E-23 and Quebec Law 25 call for.
Agent Gateway	Check agents a client can't change as their traffic passes.
ServiceNow	Reviewers answer from the tickets assigned to them, and the decision returns to the agent.
Splunk	Tune the client's agent dashboards and alerts, and run agent monitoring as a managed service.
Delivery	Clients run SaaS or Private Enterprise in their own Azure, and you deliver alone or with VeriProof.



In ServiceNow, the reviewer approves $12,500 of the $14,800 the agent requested.



In Microsoft Teams, the card carries the facts the reviewer needs to decide.

The Business Owner sees the value measures you helped define, beside recorded AI spend.

21%

of leaders said their organizations have a mature governance model for agentic AI.[1]

Pilot it with one client

Run one client workflow free for 60 days and measure the review and evidence work against how the client runs it today.
